

Flexible Information Publishing

Inmagic's interactive Web publishing tool set, Inmagic® DB/Text® WebPublisher PRO, enables you to deploy, publish and maintain textbases on the Web quickly and easily.

WebPublisher PRO provides all of the advantages of Web interactivity at an affordable price, by making it possible to deploy, publish and maintain textbases on the Web. Unlike many Web publishing tools, which may require sophisticated knowledge of HTML and XML, WebPublisher PRO utilizes the WYSIWYG forms created in Inmagic® DB/Text® Works. As a result, even non-technical users can easily publish their Inmagic textbases interactively on the Web. Through the use of such standards as XML, HTML & SOAP, WebPublisher PRO gives you the ability to interact with information, publish content and edit records in a Web browser. With WebPublisher PRO, you have the power to organize and manage all types of information including text, multimedia, and images. WebPublisher PRO increases the value of your Inmagic textbases by making them accessible 24/7 via a Web browser.

Standards Based Web Publishing

Through the use of XML, HTML, and SOAP, the WebPublisher PRO tool set is open and standards-based, providing the capabilities to:

- Publish content to the Internet or intranet via a Web browser
- Add or edit records in a browser
- Create interactive forms
- Provide multiple views of the data, with different layout, sorting, etc.
- Customize reports to your Web site design
- Tightly integrate textbases with other applications

Delivering Content to Organizations Worldwide

Many of the world's most prominent companies, universities, law firms and government agencies use WebPublisher PRO in conjunction with Inmagic DB/Text® Works software to manage business intelligence, research content, image and archive databases, product catalogs, help desk knowledgebases and more. Because WebPublisher PRO is easy to deploy and can support textbases with thousands of documents, it is ideal for information-intensive organizations that require Web-based information management solutions.

Find Information Fast

WebPublisher PRO's high-speed fielded search engine makes finding information fast, easy, and precise. WebPublisher PRO performs keyword searches through a million records in under a second. You can narrow or broaden your searches by querying multiple fields to fine-tune your results. You don't have to wade through a sea of hyperlinks or hundreds of hits to find exactly the information you need. WebPublisher PRO enables you to search and retrieve information based upon the content of documents as well as with conventionally-structured fields.

Update and Maintain Documents Effortlessly

Updating and maintaining thousands of static HTML documents is tedious work. The combination of DB/Text® Works and WebPublisher PRO provides you with a textbase-driven environment for publishing to the Web or your intranet. As a result, you can easily modify groups of documents through operations such as batch import or batch modify. By using permissions you can allow designated users to maintain specific documents.

Because Extensible Markup Language (XML) separates the content from its formatting within a Web page, you can focus on what the information is, rather than how the information is displayed. All of WebPublisher PRO's read/write capabilities — the ability to edit, add and delete records via the Web — are available using XML.

Create Custom Pages and Integrate with Other Systems using XML

WebPublisher PRO can publish using both HTML or XML. HTML publishing enables non-technical users to publish easily, but XML publishing enables programmers and IT to customize your web content or integrate it with other systems.

WebPublisher PRO System Requirements

(Summary only, see support matrix for details)

- Windows Server Operating System
- Microsoft ASP.NET Framework

WebPublisher PRO Applications

WebPublisher PRO in use at thousands of organizations around the globe. Uses include:

- A Fortune 1000 company makes a knowledge repository web-accessible on the company's intranet.
- A government agency publishes a library catalog and knowledge collection on the web for public access.
- An association makes industry information available on a self-service basis to members via the web.
- A non-profit publishes key research and findings on their website.
- A pharmaceutical company makes a variety of information more widely accessible to its global staff.
- In addition, current DB/TextWorks clients can add a variety of capabilities to their textbases through the use of WebPublisher PRO's XML, HTML, and SOAP interfaces.

Using WebPublisher PRO open and standards-based interfaces, clients have added capabilities including:

- o Adding, editing or deleting records to textbases (with password control)
- o Allowing end-users to contribute content directly to the textbase via the Web or corporate intranet
- o Enabling end-users to add comments or reviews to records in the textbase
- o Creating various Web-based submission forms
- o Providing other self-service capabilities for end users
- o Enabling end-users to submit requests and questions to appropriate staff
